RESEARCH INTERESTS

My research focuses on video generation with diffusion models. I am interested in building video generative models that are controllable, efficient, and consistent over long horizons, spanning conditional video generation from signals such as audio, compact latent spaces for efficient generation, and autoregressive generation for streaming and long video synthesis. More broadly, I see video generation as a path toward world modeling, and I am interested in how video models can serve as interactive world simulators with persistent memory of the environments they generate.

EDUCATION

Korea Advanced Institute of Science and Technology (KAIST) Sep. 2025 - Present
M.S. in Artificial Intelligence Expected Aug. 2027
Supervisor: Seungryong Kim *Seoul, Korea*

Sogang University Feb. 2017 - Aug. 2023
B.A. in American Culture / B.S.E. in Computer Science and Engineering (Double Major) *Seoul, Korea*
Magna Cum Laude (GPA: 3.90/4.30)

PUBLICATIONS

(C: Conference, P: Preprint, J: Journal; *: equal contribution)

[C4] Geometry-Aware Representation Denoising for Robust Multi-view 3D Reconstruction

EXPERIENCE

Kakao Corp. Mar. 2026 - Present
Research Intern *Seongnam, Korea*
Project 1: Acceleration of Audio-driven Portrait Animation with Autoregressive Video Diffusion Models
- Distilled an audio-driven portrait animation model into a few-step autoregressive video diffusion model for streaming generation.

Project 2: Latent Compression for Efficient Video Diffusion [P5]
- Co-designed and evaluated GRACE, which compresses the latent space of a pretrained video autoencoder to 8× fewer tokens while keeping DiT compatibility; further step-distilled it into bidirectional and autoregressive few-step models, for a 117.7× total speedup over Wan2.1-I2V-14B.

AIPARK Aug. 2025 - Dec. 2025
Research Intern *Seoul, Korea* (Remote)
Project: Real-time Audio-driven Lip Synchronization with Autoregressive Video Diffusion Models [P4]
- Led Lip Forcing: distilled a 14B bidirectional teacher into causal autoregressive students via Sync-Window DMD and a SyncNet-based reward; the 1.3B student runs in real time at 31 FPS with two-step inference.

KAIST CVLAB Sep. 2024 - Apr. 2025
Research Intern *Seoul, Korea*
Project: Text-Aware Image Restoration with Diffusion Models [C2]

University of Toronto Dec. 2023 - Jul. 2024
Visiting Graduate Researcher *Toronto, Canada*
Project: Stereo Vision-based Sidewalk Defect Detection and Measurement [C1]

Ratio Co. Ltd. Sep. 2023 - Jul. 2024
Graduate Research Assistant *Seoul, Korea*
Project: GNN-based Bicycle Route Recommendation System [J1]
